ABOUT ME

AI-focused Computer Science student at Bina Nusantara University (GPA 3.86/4.00) with hands-on experience in machine learning, NLP, computer vision, and applied AI research. Experienced in data curation, feature engineering, model experimentation, evaluation, and AI system integration across accessibility, media analysis, and flood forecasting projects. Also experienced in technical instruction and leading educational programs for 120+ participants.

EDUCATION

Bina Nusantara University

Computer Science, Streaming: Artificial Intelligence, GPA: 3.86/4.00

Tangerang Selatan

September 2024 - Present

- Finalist of Hackathon 8.0 by Binus Computer Club (BNCC)

WORK EXPERIENCE

Bina Nusantara University

Part-time laboratory assistant @ Lab Center Alam Sutera (LCAS)

Tangerang Selatan

August 2025 - Present

- Delivered software laboratory instruction to approximately 350 students across 14 class sections over 3 semesters, covering programming, software architecture, data structures, HCI, and software quality assurance.
- Supported students with debugging, programming concepts, and software development practices, using technologies including PHP, REST APIs, TypeScript, Prisma, C, Python, JavaScript, HTML/CSS, and Selenium.
- Adapted lecturer-provided laboratory materials to class needs and updated outdated instructions to reflect newer software versions, while preparing practice exercises and demonstration code.
- Designed a Computer Graphics practical project using Three.js to support hands-on learning and assessment.
- Achieved an average 3.78/4.0 student satisfaction score, based on 214 survey responses across two semesters.

SELECTED PROJECTS

Flood Prediction Model Using ENSO and IOD Indicators | [Paper report](#)

2026

Role: Research Lead & AI Model Development; **Tools:** Python, Random Forest, Bayesian Optimization, SHAP

- Formulated a flood forecasting research problem and designed a feature-engineering approach incorporating ENSO and IOD teleconnection indicators into a dataset of 208 monthly observations from January 2008 to April 2024.
- Curated flood, rainfall, ENSO, and IOD datasets from DIBI BNPB, CHIRPS HDX, and NOAA, and established the preprocessing and experimental direction for 1–6 month-ahead forecasting.
- Evaluated baseline, ENSO-only, IOD-only, and combined feature sets using Random Forest; the IOD-enhanced model achieved 0.7459 AUC, 0.6866 F1, and 0.6557 accuracy, compared with 0.6900 AUC for the baseline.
- Used SHAP analysis to interpret feature importance, identifying DMI lag-2 as the most influential teleconnection feature, while quarterly rainfall remained the strongest overall predictor.
- Accepted for presentation at ICICYTA 2026 (IEEE)

Political Bias Classifier | [Paper Report](#)

2026

Role: AI Model Developer; **Tools:** Python, NLP, Word2Vec, TF-IDF, N-grams, NER, Machine Learning

- Developed the data preprocessing and feature-extraction pipeline for a political-bias classification system using a dataset of 3,200+ news articles from 1,900+ media outlets.
- Implemented undersampling, tokenization, lemmatization, Word2Vec, TF-IDF/N-gram features, and Named Entity Recognition (NER) to represent article content for classification, which improved the model performance.
- Evaluated SVM, Naive Bayes, Logistic Regression, and Random Forest, with Random Forest achieving the strongest overall performance.
- Achieved 96% classification accuracy, with 0.97 precision, 0.95 recall, and 0.96 F1-score.

Money Talks: Computer Vision-Based Currency Recognition for the Visually Impaired

2026

Role: AI/Model & Web Development; **Tools:** Python, OpenCV, ORB, BoVW, TF-IDF, SVM, Flask, Supabase

- Defined the project problem statement and established the initial technology foundation for an accessibility-focused currency recognition MVP.
- Developed the initial model and preprocessing pipeline using OpenCV, ORB, and Bag of Visual Words

(BoVW), achieving 59% accuracy on 1,319 images across 7 denominations; teammates subsequently improved the model to 81% accuracy.

- Contributed to the Flask web foundation and integrated Supabase for application data management.

ORGANIZATION EXPERIENCE

AIESEC in BINUS

Tangerang Selatan

Team Leader of Program Specialist in Engagement with AIESEC

February 2026 - Present

Key Responsibilities

- Led a 4-person team in designing a 2-month leadership curriculum for 120 delegates and 20 coaches.
- Managed 7 program events, including 4 core capacity-building sessions, and developed a capstone project with 3 mini-projects.
- Secured 4 speakers and 2 panelists, and facilitated a collaboration with Kawan Lama Group. Received an 8.5/10 satisfaction score from speakers and panelists.
- Oversaw event operations, stakeholder coordination, and technical execution to ensure seamless delivery.
- Average participant satisfaction: 9.5+/10.

Organizing Committee of Program for Incoming Global Volunteer (IGV) Winter Peak

August 2025 - January 2026

Key Responsibilities

- Planned a 6-week schedule and agenda for Local Volunteers and Exchange Participants.
- Accommodate partner's demands that relate with program activity.
- Orchestrate a project called 'On The Map' that aligns with the SDG target 8.9.
- Served as PIC for IGV sessions and monitored project progress handled by Local Volunteers and Exchange Participants.
- Applied design thinking to support SMSEs, producing practical outputs including social media plans, banners/menus, and finance worksheets.

Organizing Committee Vice President of Delegate Service for LC5LC

September 2025 - December 2025

Key Responsibilities

- Led a 13-person team from 5 universities responsible for delegate services from pre-event through post-event.
- Created Google Sheets-based tools for progress tracking, task assignment, and job distribution, and developed a delegate dashboard containing event information, group distribution, and lost-and-found data.
- Coordinated with multiple divisions on delegate flow and event information while maintaining communication and support throughout the event lifecycle.
- Supported an event attended by 150+ delegates from 5 universities.

Himpunan Mahasiswa Teknik Informatika (HIMTI)

Tangerang Selatan

Website developer for HISHOT 2025

April 2025 - July 2025

Key Responsibilities

- Contributed to the front-end development of the HISHOT 2025 website using Node.js and Tailwind CSS.
- Used Git and GitHub for version control and collaborative development.

SKILLS

Programming: Python, C, C++, Java, JavaScript, TypeScript, PHP

AI/ML: Scikit-learn, OpenCV, Pandas, NumPy, Word2Vec, TF-IDF, SHAP, ORB, BoVW

Backend & Data: Flask, FastAPI, NestJS, REST APIs, MySQL, Supabase

Engineering: Git, GitHub, Docker, Postman

Design & Collaboration: Figma, Canva, Agile Collaboration, Technical Documentation

Professional Competencies: Team Leadership, Project Management, Stakeholder Management, Cross-functional Collaboration, Curriculum Development, Event Operations, Public Speaking, Problem Solving
